China

Ancient

939. **ZHOU: Spring-Autumn Period**, 770-475 BC, AE shield (33.87g), Opitz page-152, Coole page-112, 43x141mm, these archaeological objects are called “Shield Framework” or “Gridiron” money, with a knotted dragon element at each end, light encrustation, a lovely example! VF , *ex Shawn Hamilton Collection* $150 - 250

Some older Chinese numismatic works describe these as a form of primitive money, but there is no evidence to support such a claim. These are still rarely encountered ancient artifacts.

Photo size reduced.

940. **ZHOU: Spring and Autumn Period**, 650-400 BC, AE bell money (24.77g), “bell money” (*zhong qian* or *ch ‘ung*) with curved base, raised pellets in crisscross design, with original clapper, VF , *ex Shawn Hamilton Collection* $100 - 150

Charles Opitz lists these with the comment that they were not currency, but are included in many collections. For many years they have been considered a form of money by some authors, but these have been found in tombs as sets of bells used for making music and sets include small bells up through large ones, each probably playing one note. Whether currency or not, they are still interesting artifacts.

941. **WARRING STATES: Anonymous**, 475-220 BC, AE halberd (7.03g), 93x38mm, so-called “halberd head money”, the *ge bi* (miniature halberd), VF , *ex Shawn Hamilton Collection* $100 - 150

These are mentioned in Jen’s book, in which he writes that they were found starting in 1986 around Shaoxing, Zhejiang, site of the ancient State of Yue. These are listed on page 155 in “An Ethnographic Study of Traditional Money: A Definition of Money and Descriptions of Traditional Money” by Charles Opitz.

942. **WARRING STATES: Ba & Shu States**, 300-225 BC, AE bridge money (10.01g), dragon head “bridge money”, with ornate design and holed at top as made, lovely patina! EF-AU $100 - 150

Though colloquially known as ‘bridge money,’ these bronze ‘bridges’ are formally known only as funerary objects designed to imitate the stone chimes of the bianqing. Bridge Money pieces have now been dated to circa 306-221 BC and are accepted by many - but not all - Chinese numismatists as actual coins of Ba and Shu States during the Warring States period.

943. **WARRING STATES: State of Zhou**, 400-300 BC, AE spade money (17.81g), H-2.163, sloping-shoulder hollow handle spade, *an zang* (or *cong*) in archaic script, VF $1,500 - 2,000

Sloping shoulder spades usually have a sloping shoulder with the two outside lines on the obverse and reverse at an angle. The central line is often missing. This type is generally smaller than the prototype or square shoulder spades. Their inscriptions are clearer and usually consist of two characters. They are associated with the Kingdom of Zhou and the Henan area. Their smaller size indicates that they are later in date than square shoulder spades.

944. **WARRING STATES: State of Liang**, 400-300 BC, AE spade money (13.29g), H-3.8, flat handled spade, *an yi yi jin* in inverted archaic script, imperfect casting, Fine , *ex Richard Kurlish, ex Shawn Hamilton Collection* $100 - 150

Following a number of battles with neighboring states, the Chu capital moved to Ying, near modern-day Jingzhou City on the Jianghan Plain in the western part of Hubei Province. Ying was the capital of the State of Chu until 278 BC. These gold block money items were made in what is now Hubei province. They were cut from larger bars which allowed for the making of small denominations. Historically, this is China's first gold currency with a fixed shape and size.

952. **WARRING STATES: State of Liang**, 350-250 BC, AE cash (8.77g), H-6.3, round central hole, *yuan* at right in archaic script, VF , *ex Dr. Allan Pacela Collection* $100 - 150

This coin type is traditionally associated with Qin Shi Huang Di, the first Chinese Emperor, who united China in 221 BC. The History of Han says: "When Qin united the world, it made two sorts of currency: that of yellow gold, which was called yi and was the currency of the higher class; and that of bronze, which was similar in quality to the coins of Zhou, but bore an inscription saying Half Ounce, and was equal in weight to its inscription."

956. **WARRING STATES:** LOT of 45 State of Yan, *ming dao* "knife money", cast 400-220 BC, a wonderful selection of mostly different types, nearly all with full clear reverse characters, many superb quality examples, this is one of the finest collections of Ming knives we have handled, viewing highly recommended, retail value $1800, **lot of 45 items**, *ex Shawn Hamilton Collection* $800 - 1,000

Shang Lin San Guan refers to the Three Offices of Shang Lin Park which were the Office for Coinage, the Office for Sorting Copper, and the Office of Price Equalization. Minting was now confined to the central authorities. These coins usually have a raised rim on the top of the hole on the obverse. Their quality was so high that forgery became unprofitable except to true artisans, great villains, or thieves. All earlier coins were to be melted down and the copper taken to Shang Lin.

The Tai Ping Bai Qian coin was at first attributed to Sun Liang of Eastern Wu, who adopted a Tai Ping year title in 256. Most of them, however, have been unearthed in Sichuan (in one instance in a tomb dated to 227) together with Zhi Bai coins, which, together with the incuse marks on the reverse, indicates that they are issues of Shu Han. The fancy calligraphy and reverses of the large coins are more typical of amulets than circulating coins, and Peng seeks to associate them with the Taiping Taoists of the time.

961. **SHU-HAN: Anonymous**, 221-265, AE cash (1.24g), H-11.27, *dìng píng yi bai* (ding ping one hundred), lovely patina! VF $125 - 175

In the 1860s, a jar of small "goose eye" coins was dug up in Chengdu in Sichuan. It contained Tai Ping Bai Qian, Ding Ping Yi Bai, Zhi Bai, and Zhi Yi coins. This reinforces the supposition that all these coins are near contemporaries, issued by Shu Han.

966. **TANG: Jian Zhong**, 780-783, AE cash (3.87g), H-14.133, VF $100 - 150

We have handled only a few of these types in iron and all were heavily encrusted.

Da Chao means “Great Dynasty,” the name the Mongols used for themselves. According to Hartill, “This coin is alleged to have been cast by the legendary Chengis Khan at his capital at Karakorum. It is usually found in silver.” This would place the date about 50-60 years prior to the formal foundation of the Yuan dynasty in 1280, when Khubilai Khan was installed as Emperor of China at Beijing. An alternative attribution assigns this type to the period of Kublai Khan (1260-1294), who first claimed the title of Khaqan in 1260, finalizing his power after the defeat of his rival, Ariq Böke, in 1264.

The term "coin tree" is usually associated with the traditional method of casting Chinese coins. By the time of the Tang Dynasty (618-907 AD), the coins were being made in sand molds. Each mold would have a number of coin impressions so that many coins could be produced at a time. These coin impressions were connected by channels so that the molten bronze could be poured into the mold at one opening and then flow to all parts of the mold. Once the bronze had cooled and hardened, the two halves of the mold were separated and the coins removed. However, since all the coins were connected by the channels through which the bronze had flowed, the bronze in the channels had hardened as well resulting in all the coins being connected together. The metal object that came out of the mold actually looked like a small "tree". The main channel through which the bronze had flowed resembled the "trunk" of a tree. The smaller channels which ran from the main channel to each individual coin looked like "branches". The coins were the "leaves". The coins were then broken off of the "branches". This left a small metal stub, called a "sprue", on the edge of each coin where it had been attached to the branch. The molding process would also leave a little excess metal on the edge of the coins. The sprues and excess metal needed to be filed off to improve the appearance of the coins. The coins, which all had square holes in the center, were then stacked onto a square metal rod. The combination of a square rod threaded through the coins' square holes locked the coins from rotating on the rod and thereby made it easier for the worker to file off the sprue and excess metal on the edges of the coins.

The Golden Coin Society, a branch of the Tiandihui (Heaven and Earth Society) that was active during the Taiping Rebellion, was a fraternal organization dedicated to removing the Manchus from China. Their name was initially derived from their membership badge, a pair of Kang Xi Tong Bao coins fixed back-to-back by a red silk thread, so as to obscure the Manchu inscriptions on the reverse. As the society grew, more personalized badges were needed. Several varieties of these 'coins' exist, all with a curiously written jin character. The first two strokes of the word are written in a way that resembles the element ru (enter).

1306. **TIBET:** AR tangka dkarpo sa rpa, ND (1953-54), Y-31, Second Monk issue, an attractive mint state example! PCGS graded MS62 $150 - 250

Formerly it was assumed that these tangkas were distributed to monks on behalf of the 14th Dalai Lama in the late 1940s. The Tibetans referred to this Tangka as Tangka dkarpo sa rpa (“new white tangka”) in order to distinguish it from the normal gaden tangkas. This coin circulated for some time at the value of 5 srang which shows the high inflation rate which was prevailing in Tibet in the 20th Century. In the 19th Century 6½ tangkas were equivalent to 1 srang which corresponded to slightly more than 37 grams of silver. Taking the circulating value of this “Monk” tangka as a base, 1 srang was equal to about 33½ tangkas in 1953-54.
